

## Features

- One red, one black pushbutton
- Small size keyfob type case, measures only 55x35x15mm
- Ideal for door, barrier and gate controls
- Range up to 50 metres
- 2 year battery life from standard MN23A 12V alkaline battery
- Lightweight and robust

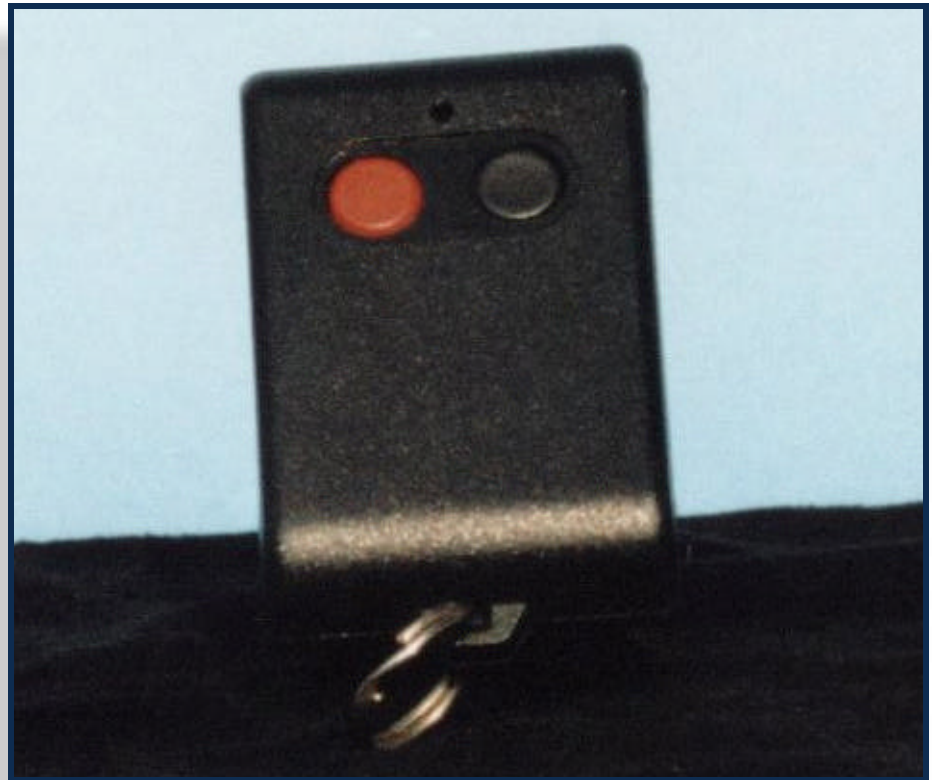

## Compatibility

- Compatible with all Cape 200 series transmitters and receivers, allowing customers to specify their own systems.

## Programming

- All systems are designed and produced in-house, allowing us to provide a custom-programmed solution to your exact requirements. This includes features such as momentary or latching outputs, one button to activate several outputs with differing time constants, and multiple transmitters to single receiver operation.

## Receivers

## FEATURES

The type 201 transmitter is a low cost, compact keyfob type unit for use where single or dual pushbutton control is necessary. The transmitter, despite its small size and low cost, has excellent transmitting range and can control several different functions. Due to the flexibility of the 200 series receiver, it is possible to have up to four transmitters controlling up to two output relays each on the receiver. The transmitter normally attaches to a keyring, but can also be supplied with an optional pocket / belt clip.
